CURRENT POPULATION REPORTS

Consumer Income

Series P-60, No 154

**Money Income
and
Poverty Status
of
Families and
Persons in the
United States:
1985**

(Advance Data From the March
1986 Current Population Survey)

ACKNOWLEDGMENTS

This report was prepared by **Edward J. Welniak, Jr.**, of the Income Statistics Branch and **Arno I. Winard**, Staff Assistant for Poverty Statistics, Population Division. Staff members contributing to the collection and compilation of the data and the preparation, analysis, and statistical review of the text were **Mary F. Henson**, **Robert W. Cleveland**, and **Robert Bennefield**. Clerical assistance was provided by **Helen Ogle**, **Rose Mary Schade**, and **Eleanor Baugher**. The report was prepared under the direction of **John F. Coder**, Chief of the Income Statistics Branch, and **John M. McNeil**, Chief of the Poverty and Wealth Statistics Branch. Sampling review was conducted by **Janet G. Yax** and **M. Diana Harley** of the Statistical Methods Division. Overall direction was provided by **Gordon W. Green, Jr.**, Assistant Division Chief (Socioeconomic Statistics Programs), Population Division.

TEXT TABLES

✓A. Comparison of median family money income in 1985 and 1984, by selected characteristics	2
✓B. Persons, families, and unrelated individuals below the poverty level in 1985 and 1984	3
✓C. Comparison of 1985 income and poverty measures for households, families, and persons, by earnings limit, race and Spanish origin	5

DETAILED TABLES

Money Income of Families, Persons, and Households in 1985

✓1. Selected characteristics of families—number of families and median income in 1985 and 1984 of all families and families with householders working year round full time, by race and Spanish origin of householder	6
✓2. Family income in 1970 to 1985—families, by total money income, race, and Spanish origin of householder	9
✓3. Family income in 1970 to 1985—families, by total money income in 1985 dollars, race, and Spanish origin of householder	10
4. Number of families and unrelated individuals, income at selected positions, and percentage share of aggregate income in 1985 received by each fifth and top 5 percent of families and unrelated individuals, by race of householder and region	11
5. Race and farm-nonfarm residence—families and unrelated individuals, by total money income in 1985	11
6. Age of householder—families and unrelated individuals, by total money income in 1985	12
✓7. Selected characteristics of persons—number with income and median income in 1985 and 1984 of all persons 15 years old and over and persons working year round full time, by sex	13
8. Race and farm-nonfarm residence—persons 15 years old and over, by total money income in 1985 and sex	15
9. Marital status—persons 18 years old and over, by total money income in 1985 and sex	15
10. Age—persons 15 years old and over, by total money income in 1985 and sex	16
11. Work experience in 1985—civilians 15 years old and over, by total money earnings in 1985 and sex	17
12. Total money income in 1970 and 1972 to 1985—persons 14 years old and over, by sex	18
✓13. Total CPS population and per capita money income in 1967 to 1985, by race and Spanish origin	19
✓14. Selected characteristics of households—households, by total money income in 1985	20

DETAILED TABLES—Continued**Characteristics of Poverty Population in 1985**

	Page
✓15. Number, poverty rate, and standard errors—persons, families, and unrelated individuals below the poverty level in 1985 and 1984	21
✓16. Persons below the poverty level, by family status, type of family, race, and Spanish origin, for selected years	22
✓17. Persons below 125 percent of the poverty level, by family status, type of family, race, and Spanish origin: 1970 and 1980 to 1985	25
✓18. Age, type of residence, region, and work experience—poverty status in 1985 of persons, by race and Spanish origin	27
✓19. Selected characteristics of families—poverty status in 1985 of all families and families with female householder, no husband present, by race and Spanish origin of householder	29
✓20. Type of residence and region—poverty status in 1985 of families and unrelated individuals, by race and Spanish origin of householder	31
✓21. Size of income deficit—families and unrelated individuals below the poverty level in 1985, by sex, race, and Spanish origin of householder	32

Money Income and Poverty Status of Families and Persons in the United States: 1985 (Advance Report)

NOTE

Income and poverty data in this report for 1985 are the first estimates based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence categories such as metropolitan, nonmetropolitan, farm, and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed in this report. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS income supplement was revised to allow for the coding of larger earnings amounts on the questionnaire. A description of this change and its effect on estimates in this report can be found in the section discussing the revised earnings question.

INCOME OF FAMILIES

For the third year in a row, median family money income continued to move ahead of inflation according to results of the March 1986 Current Population Survey (CPS) conducted by the Bureau of the Census. In 1985, median family income was \$27,740, 4.9 percent higher than the 1984 median of \$26,430. After adjusting for the 3.6-percent increase in consumer prices between 1984 and 1985, real median family income increased by 1.3 percent.¹ The 1.3-percent real increase in family income between 1984 and 1985 follows increases of 2.8 percent for 1983-84 and 1.6 percent for 1982-83.²

Both White families and Black families posted gains in real median income in 1985. The median income for White families was \$29,150, 1.7 percent higher than in 1984. The median income for Black families was \$16,790, 5.0 percent higher than in 1984. Spanish median family income, \$19,030 in 1985, showed no statistically significant change from 1984.³

The median income of married-couple families was \$31,100 in 1985; with the wife in the paid labor force it was \$36,430. In March 1986, about 80 percent of all families were married couples of which 54 percent had a wife in the paid labor force. Ten years earlier, 84 percent of all families were married couples and 44 percent had the wife in the paid labor force. The median income for families with a female householder, no husband present, was \$13,660 in 1985.

Data by educational attainment level of the family householder indicate that families in which the householder completed high school had a median income of \$27,470 in

1985. In contrast, families with a householder completing 4 years of college had a median income of \$43,190, and those with 5 or more years of college had a median of \$50,530.

EARNINGS OF YEAR-ROUND, FULL-TIME WORKERS

While the median earnings of men, \$24,200, showed no statistically significant change from 1984, the earnings of women, \$15,620, rose by 2.1 percent in real terms. In 1985, 66.3 percent of civilian male workers 15 years old and over worked year round, full time. This compares with 48.5 percent of women. Ten years earlier, 62.7 percent of men and 40.6 percent of women worked year round, full time.

PER CAPITA INCOME

Beginning with this year's report, a table showing per capita money income that has previously appeared in final income reports in the Consumer Income P-60 Series has been included. (See table 13.) Per capita income is computed by dividing the total aggregate money income by the total population. Basically, it is the amount of income per person, for every man, woman, and child in the CPS noninstitutional population. Per capita income differs from family income in that it includes the income of all persons whereas family income is restricted to the income of related persons living in households. Changes in family income do not, therefore, reflect the changes in income for other segments of the population, such as unrelated individuals, or the fact that the characteristics of families are changing. Changes in family characteristics, such as declines in average family size or decreases in the proportion of married couples, can affect the measurement of family income. Use of per capita income provides a measure that includes all population segments and that is less affected by changes in family composition.

¹Changes in real income refer to comparisons after adjusting for inflation. The percentage change in prices between 1984 and 1985 was computed by dividing the annual average Consumer Price Index (CPI) for 1985 by the annual average value of the CPI for 1984. See table A-2 of appendix A for CPI's from 1947 to 1985.

²The percent change in median income between 1982 and 1983 was not significantly different from the 1983-84 or 1984-85 changes.

³The percent changes in median family income for Whites, Blacks, and Hispanics were not statistically different from one another.

Table A. Comparison of Median Family Money Income in 1985 and 1984, by Selected Characteristics

Characteristic	Median family money income			Percent change in real money income	
	1985	1984			
		Constant dollars	Current dollars		
All families.....	\$27,735	\$27,376	\$26,433	*1.3	
RACE OF HOUSEHOLDER					
White.....	29,152	28,074	27,686	*1.7	
Black.....	16,786	15,983	15,432	*5.0	
Spanish origin.....	19,027	19,505	18,833	-2.5	
EDUCATION OF HOUSEHOLDER ²					
Elementary: Total.....	15,370	15,470	14,937	-0.6	
High school: 4 years.....	27,472	27,475	26,528	-	
College: Total.....	39,487	38,629	37,298	*2.2	
1 to 3 years.....	32,177	31,759	30,665	1.3	
4 years.....	43,187	42,177	40,724	*2.4	
5 years or more.....	50,525	48,321	46,656	*4.6	
TYPE OF FAMILY					
Married-couple families.....	31,100	30,669	29,612	*1.4	
Wife in paid labor force.....	36,431	35,905	34,668	*1.5	
Wife not in paid labor force.....	24,556	24,423	23,582	0.5	
Male householder, no wife present.....	22,622	24,157	23,325	*-6.4	
Female householder, no husband present.....	13,660	13,260	12,803	3.0	

*Significant at the 95-percent confidence level.

¹Persons of Spanish origin may be of any race.

²Restricted to householders 25 years old and over.

Over the past 10 years, the change in real per capita income differs significantly from that of median family income. For example, between 1975 and 1985 per capita income has increased by about 1.2 percent per year. This compares with an average annual change in median family income of about 0.1 percent per year.⁴ In 1985, real per capita money income in the United States was \$11,010 up 2.1 percent from 1984. The per capita income of Whites in 1985 was \$11,670 up 2.0 percent from 1984; for Blacks it was \$6,840 up 4.9

percent, and for Spanish-origin persons it was \$6,610, unchanged from 1984.⁵ The changes in per capita income between 1984 and 1985 for Whites, Blacks, and Hispanics were not statistically different from one another.

POVERTY STATUS

The number of persons below the poverty level was 33.1 million in 1985. The difference between the 1985 figure and the 1984 estimate of 33.7 million was not statistically significant. The percentage of persons in poverty was 14.0 in 1985; the 1984 figure was 14.4 percent. The difference was not statistically significant at the usual 95-percent level of confidence but was significant at the 90-percent confidence level. The poverty threshold for a family of four in 1985 was \$10,989.

⁴The 0.1-percent annual average change in median family income was not statistically significant.

⁵The percent change in per capita income between 1984 and 1985 is based on a 1985 amount consistent with 1984 topcoded to \$99,999. (See section on revisions to the earnings question on the March 1986 CPS.)

**Table B. Persons, Families, and Unrelated Individuals Below the Poverty Level in
1985 and 1984**

(Numbers in thousands. Persons, families, and unrelated individuals as of March of the following year)

Characteristic	Below poverty level			Poverty rate

- Rounds to zero.

*Significant at the 95-percent confidence level.

**Significant at the 90-percent confidence level.

¹Persons of Spanish origin may be of any race.

The estimates of poverty in this report are based solely on money income. The value of noncash benefits such as food stamps, Medicare, Medicaid, and public housing are not included as income for purposes of estimating the poverty population. For a further discussion on valuing noncash benefits and poverty, see the section discussing alternative estimates of poverty.

Both the number of Blacks in poverty and their poverty rate declined between 1984 and 1985. The number declined from 9.5 million to 8.9 million, and the rate declined from 33.8 percent to 31.3 percent. There was an increase of approximately 430,000 in the number of Spanish-origin persons in poverty (from 4.8 million to 5.2 million). The poverty rate among Spanish-origin persons, 29.0 percent in 1985 versus 28.4 percent in 1984, did not show a statistically significant change. There were no statistically significant changes in either the number or percentage of Whites in poverty. In 1985, 22.9 million Whites were in poverty and their poverty rate was 11.4 percent.

The poverty rate among related children under 18 years old was 20.5 percent in 1985, not statistically different from the 1984 rate. The rate did not change significantly among White children (15.9 percent in 1985), Black children (43.4 percent in 1985), or Spanish-origin children (39.9 percent in 1985, not statistically different from the figure for Black children).

The number of poor elderly persons in 1985 was 3.5 million and their poverty rate was 12.6 percent. Neither of these figures was significantly different from the 1984 estimates.

The number of poor families in 1985 was 7.2 million, and 3.5 million of these poor families had a female householder, no husband present. Both of these figures were about the same as the 1984 estimates. The poverty rate among Black families was 28.7 percent in 1985; the change from the 1984 figure of 30.9 percent was significant at the 90-percent level of confidence but not at the 95-percent level. There were no significant changes in the number or percentage of White families in poverty, but there was some evidence of an increase in the number of Spanish-origin families in poverty.

The poverty rate among unrelated individuals was 21.5 percent in 1985 and 6.7 million were in poverty. There was no statistically significant change in either the number or percentage of unrelated individuals in poverty.

Among regions, the number in poverty and the poverty rate declined in the Northeast, but the poverty figures in the other regions did not change significantly. The rate in the Northeast fell from 13.2 percent to 11.6 percent. The rate was lowest in the Northeast and highest in the South (a poverty rate of 16.0 percent).

ALTERNATIVE ESTIMATES OF POVERTY

While Federal expenditures intended to assist the low-income population are now concentrated in programs that

provide in-kind or noncash benefits, the value of these benefits are not included as income in official estimates of the poverty population. For the past several years the Bureau of the Census has provided alternative estimates of poverty based on income definitions that include values of selected noncash benefits. These estimates, which have been exploratory in nature, indicate significantly lower estimates of poverty following the inclusion of noncash benefit values. The latest of these estimates, shown in Technical Paper 55, *Estimates of Poverty Including the Value of Noncash Benefits: 1984*, indicate poverty rates which are between 8 and 33 percent lower than those based solely on money income depending on the income definition used.

Alternative estimates of poverty for 1985 are being prepared and are expected to be released in Technical Paper 56 in September. In addition to the estimates of poverty based on an income definition that includes noncash benefit values, this report will present a discussion of the highlights of the 2-day Conference on the Measurement of Noncash Benefits held in December 1985.

REVISIONS TO THE EARNINGS QUESTION ON THE MARCH 1986 CPS

The Census Bureau has made a revision to the March CPS income supplement questionnaire in an effort to adapt to continually rising levels of annual income. Beginning with the March 1986 CPS, question number 48, which covers the amount of earnings received from the employer or own business for which the respondent worked the longest during the previous calendar year, was modified to permit coding of earnings amounts to a maximum of \$299,999. Prior to March 1986, procedures allowed for coding of amounts to a maximum of \$99,999. In March 1977, about 127,000 weighted sample persons reported receiving earnings in the previous calendar year in excess of the \$99,999 maximum. In March 1986, when the revision was made, about 627,000 weighted sample persons reported receiving earnings in excess of this maximum. About 16,000 weighted sample persons reported earnings amounts that exceeded the revised maximum of \$299,999.

This change in the questionnaire causes a break in the time series for some income measures. Table C has been included to indicate the effect of the questionnaire revision on selected income measures. Overall the revision added about \$22.9 billion to the total aggregate income that would have gone undetected had the \$99,999 limit continued. Mean income, per capita income, shares of aggregate income by quintile and the index of income concentration (GINI Index) were all affected by the revision and caution should be used when comparing the 1985 data to earlier years.

Table C. Comparison of 1985 Income and Poverty Measures for Households, Families, and Persons, by Earning Limit, Race, and Spanish Origin

Income measure	Earnings limited to:								Percent change due to increased earnings limit

¹Beginning with 1980, includes members of unrelated subfamilies not shown separately. For 1970, unrelated subfamily members are included in the 'in families' categories.

²Persons of Spanish origin may be of any race.

³Includes female unrelated individuals.

⁴Includes male unrelated individuals.

Note: Beginning with 1980, data are based on 1980 census population controls.

¹Persons of Spanish origin may be of any race.

²Includes female unrelated individuals.

³Includes male unrelated individuals.

⁴Includes unrelated subfamilies.

Appendix A. Definitions and Explanations

Population coverage. This report includes the civilian noninstitutional population of the United States (the 50 States and the District of Columbia) and members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces.

Money income. Income distributions and income summary measures (such as medians and means) shown in this report are limited to money income before payment of Federal, State, local, or Social Security (FICA) taxes and before any other types of deductions, such as union dues and Medicare premiums. Total money income is the sum of the amounts received from wages and salaries, self-employment income (including losses), Social Security, Supplemental Security Income, public assistance, interest, dividends, rent, royalties, estates or trusts, veterans' payments, unemployment and workers' compensations, private and government retirement and disability pensions, alimony, child support, and any other source of money income which was regularly received. Capital gains (or losses) and lump-sum or one-time payments such as life insurance settlements are excluded.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (excluding patients or inmates in institutional quarters) in that group.

Underreporting. As in most household surveys, the estimates of the number of money income recipients and the total amount of money income derived from the March CPS are somewhat less than comparable estimates derived from independent sources, such as the Bureau of Economic Analysis, Social Security Administration, and Veterans Administration. The difference between the survey estimate and the independent estimate is generally termed "underreporting." Underreporting tends to be more pronounced for income sources such as public assistance and welfare, unemployment compensation, and property income (interest, dividends, and net rental income). Estimates of income from wages and salaries tend to have less underreporting than most income types. For further details concerning the reporting of money income, see "Appendix C. Underreporting of Income."

Poverty definition. Families and unrelated individuals are classified as being above or below the poverty level using the poverty index originated at the Social Security Administration in 1964 and revised by Federal Interagency Committees in 1969 and 1980. The poverty index is based solely on money income and does not reflect the fact that many low-income

persons receive noncash benefits such as food stamps, Medicaid, and public housing. The index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition. It was determined from the Department of Agriculture's 1955 Survey of Food Consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the Economy Food Plan. For smaller families and persons living alone, the cost of the Economy Food Plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). The average poverty threshold for a family of four was \$10,989 in 1985, about 3.6 percent higher than the comparable 1984 cutoff of \$10,609. Weighted average poverty thresholds by size of family are shown in table A-1. For further details, see Current Population Reports, Series P-60, No. 152.

Table A-1. Weighted Average Poverty Thresholds in 1985

Size of family unit	Threshold
One person (unrelated individual)...	\$ 5,469
15 to 64 years.....	5,593
65 years and over.....	5,156
Two persons.....	6,998
Householder 15 to 64 years.....	7,231
Householder 65 years and over.....	6,503
Three persons.....	8,573
Four persons.....	10,989
Five persons.....	13,007
Six persons.....	14,696
Seven persons.....	16,656
Eight persons.....	18,512
Nine persons or more.....	22,083

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group

of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and a the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit or a group of unrelated persons sharing a housing unit as partners is also counted as a household. The count of households excludes group quarters.

Family. The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered members of the same family. Thus, if the son of the householder and the son's wife are in the household, they are treated as part of the householder's family. However, a lodger and his wife not related to the householder or an unrelated servant and his wife are considered as additional families, not a part of the householder's family. These unrelated subfamilies are not included in the count of total families.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household; (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters (such as a rooming house). Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

The estimates in this report are based on data obtained annually in March of 1948 through 1986 from the Current Population Survey (CPS) conducted by the Bureau of the Census and from supplementary questions to the CPS. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member in every sample household. In addition, supplementary questions are asked every March about money income and work experience for the previous year. In order to obtain more reliable data for the Hispanic population, the March CPS sample was enlarged to include all households from the previous November which contained at least one sample person of Hispanic origin. For this report, persons in the Armed Forces living off post or with their families on post are included.

Current Population Survey (CPS). The present CPS sample was selected from the 1980 census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 60,500 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason.

CPS estimation procedure. The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, sex, and Hispanic/non-Hispanic categories. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. Beginning with reports containing income data for 1980, the independent population estimates used to obtain data for years 1979 and later are based on the 1980 census. Data for 1971 through 1979 were obtained using independent population estimates based on the 1970 decennial census.

RELIABILITY OF ESTIMATES

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been ob-

tained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey—sampling and nonsampling. The accuracy of a survey result depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates. The standard errors provided for the CPS estimates primarily indicate the magnitude of the sampling error. They also partially measure the effect of some non-sampling errors in responses and enumeration, but do not measure any systematic biases in the data. (Bias is the difference, averaged over all possible samples, between the estimate and the desired value.)

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability; that is, of the variations that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals—ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypotheses appearing in this report is that the population parameters are different. An example of this would be

comparing the median annual income of Black families versus the median annual income of White families. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

To perform the most common test, let x and y be sample estimates for two characteristics of interest. Let the standard error on the difference $x-y$ be σ_{DIFF} . If the ratio $(x-y)/\sigma_{\text{DIFF}}$ is between -2 and +2, no conclusion about the difference between the characteristics is justified at the 0.05 level of significance. If, on the other hand, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 0.05 level. In this event, it is commonly accepted practice to say that the characteristics are different. Of course, sometimes this conclusion will be wrong. When the characteristics are, in fact, the same, there is a 5 percent chance of concluding that they are different. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between characteristics is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between characteristics is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison is qualified, e.g., by use of the phrase "some evidence."

Comparability of data. Income and poverty estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence categories such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed in this report. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS income supplement was revised to allow the coding of larger earnings amounts on the questionnaire.

Caution should be used when comparing estimates for 1985 with earlier years because of the change in the 1970 and 1980 census-based sample designs. The combination of the phase-out of the 629 sampling areas obtained by sampling from the 1970 census materials and the phase-in of the 729 sampling areas obtained by sampling from the 1980 census materials means that the current number of sample areas is not completely comparable to the old number of sample areas since many of the sample areas have been redefined. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 130).

Note when using small estimates. Summary measures (such as medians and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than

those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of categories as serve each user's needs. Also, care must be taken in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus discrediting a seemingly valid hypothesis test.

STANDARD ERRORS OF ESTIMATED NUMBERS AND ESTIMATED PERCENTAGES

Since this is an advance report, standard error parameters are provided in table B-1 for estimated numbers and estimated percentages of households, families, unrelated individuals, persons for only certain characteristics which are considered the most important among the data in the report.

Two parameters (denoted "a" and "b") are used to calculate standard errors for each type of characteristic. Direct computation of the standard errors will give more accurate results than the use of standard error tables.

Standard errors of estimated numbers and estimated percentages can be computed directly with formulas (1) and (2), respectively. The formulas are

$$\sigma_x = \sqrt{ax^2 + bx} \quad (1)$$

Here, x is the size of the estimate and a and b are parameters associated with the characteristic.

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot (p)(100-p)} \quad (4)$$

Here, x is the size of the subclass of the population which is the base of the percentage, p is the percentage ($0 < p < 1$) and b is the parameter associated with the characteristic.

Table B-1 provides the values of the a and b parameters are used in formulas (1) and (2) to create standard error estimates of estimated numbers and estimated percentages of households, families, unrelated individuals, and persons.

Standard error of a difference. The formula for the standard error of the difference between two estimates x and y , is given by

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2 - 2\rho\sigma_x\sigma_y} \quad (3)$$

where σ_x and σ_y are the standard errors of the estimates x and y , and ρ represents the correlation between the estimates.

For the year-to-year comparisons of income and poverty estimates the correlation coefficients, ρ , are contained in detailed reports in this series, (Current Population Reports Series P-60, Nos. 151 and 152). For other comparisons assume ρ equals zero. Making this assumption will result in accurate estimates of the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Table B-1. Parameters for Direct Computation of Standard Errors of Estimated Numbers and Percentages of Households, Families, Unrelated Individuals, and Persons: 1980 to 1985

Characteristic	Parameters	
	a	b
Number of households, families, and unrelated individuals:		
All races or White.....	-0.000010	1,896
Black and/or other races.....	-0.000081	2,067
Spanish origin.....	-0.000165	2,067
Number of persons:		
All races or White.....	-0.000011	2,077
Black and/or other races.....	-0.000092	2,374
Spanish origin.....	-0.000189	2,374
Families below poverty level:		
All races or White.....	0.000084	2,067
Black and/or other races.....	0.000084	2,067
Spanish origin.....	0.000084	2,067
Persons below poverty level:		
All races or White.....	-0.000052	9,628
Black and/or other races.....	-0.000375	9,628
Spanish origin.....	-0.000768	9,628

Note: For years prior to 1980, a standard error estimate computed with these parameters must be adjusted. For 1947 to 1954, multiply the standard error by 1.6, for 1955 to 1964, multiply by 1.3, for 1965 multiply by 1.1, and for 1966 to 1979 multiply by 0.9.

Appendix C. Underreporting

This appendix discusses some important aspects of income underreporting and its measurement, and presents some estimates of underreporting for the base year 1983. The general survey phenomenon that is commonly termed under-reporting actually refers to the tendency of household surveys to underestimate the number of income recipients and/or the amount of income received. There are three main causes for underreporting. These are failure to report receipt of the income type, underreporting of the amount received, and misclassification of the income type received.

Accurately measuring the extent of underreporting of cash income is difficult for many of the income types. There are two main components of measuring underreporting: the number of income recipients and the total amount of income received. Measuring the survey undercount of recipients for the March CPS is extremely difficult because independent estimates (benchmarks or controls) for the CPS noninstitutional, "ever-received during the year" recipient concept are

difficult to validate. In addition, some of the administrative sources required for the derivation of independent estimates have significant errors themselves.

The derivation of accurate underreporting estimates amounts of income is easier but still not without significant problems. In general, better administrative data are available for the annual amount of income received, than for the number of recipients. Some of the more important problems associated with development of the independent controls for amounts are adjusting independent estimates to the CPS income concept, significant differences between alternate sources of independent estimates for the same income type, especially self-employment income, interest, dividends, and rents, periodic revisions to the sources of independent estimates, delay availability of data and significantly alter estimate underreporting. Table C-1 shows estimates of underreporting for amounts of aggregate income in 1983 by income type.

Table C-1. Comparisons of CPS Aggregate Money Income in 1983 With Independently Derived Estimates, by Income Type

(Billions of dollars)

Source of income	Independent estimate	CPS estimate	CPS as percent independent
Total.....	2,402.5	2,164.9	9
Wages and salaries.....	1,632.3	1,616.3	9
Self-employment.....	112.6	130.1	11
Social Security ¹	155.2	142.3	9
Supplemental Security Income.....	9.0	7.6	8
Aid to Families with Dependent Children.....	13.8	10.5	7
Interest, dividends, and rental income.....	315.4	143.2	4
Veterans' payments.....	14.0	8.8	6
Unemployment compensation.....	26.1	19.7	7
Workers' compensation.....	14.1	6.6	4
Private, government, and military pensions.....	110.1	79.7	7
